Sequence 1, Application US/09439813

Sequence 1, Application US/09439813

Patent NO. 6517845

GENERAL INFORMATION:

APPLICANT: Lee, Fang-Jen S.

APPLICANT: Wu, Chung-Hsium H.

TITLE OF INVENTION: MYCOBACTERIUM TUBERCULOSIS SUPEROXIDE

TITLE OF INVENTION: MYCOBACTERIUM TUBERCULOSIS SUPEROXIDE

TITLE REFERENCE: 10457-002001

CURRENT APPLICATION NUMBER: US 60/108/309

PRIOR PILING DATE: 1999-11-12

PRIOR PILING DATE: 1998-11-13

NUMBER OF SEQ ID NOS: 8

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 1

LENGTH: 720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            720

Patent No. 6084152

GENERAL INFORMATION:
APPLICANT: Sang Soo Kwak
APPLICANT: Asng Soo Kwak
APPLICANT: Haeng-Soon Lee
APPLICANT: Bang-Soon Kwon
TITLE OF INVENTION: METHOD FOR PRODUCING TRANSGENIC CUCUMBER
TITLE OF INVENTION: METHOD FOR PRODUCING TRANSGENIC CUCUMBER
TITLE OF INVENTION: METHOD FOR PRODUCING TRANSGENIC CUCUMBER
TITLE OF INVENTION: METHOD FOR PRODUCES HIGH LEVELS OF SUPERCXIDE DISMUTASE
TITLE OF INVENTION: MARCHER: 1990-04-14
CURRENT APPLICATION NUMBER: KS 98 13205
EARLIER APPLICATION NUMBER: KS 98 33947
EARLIER APPLICATION NUMBER: KS 99 11848
EARLIER FILING DATE: 1990-04-06
SARLIER FILING DATE: 1990-04-06
SOFTWARE: FEASEQ for Windows Version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  229 ACTGGGCCA------CACTTTAACCCTTCTGGCAAAGATCATGGT----

Sequences were basecalled with phred and vector was masked with
crossmatch (see http://genome.washington.edu). Sequences were then
trimmed from both ends to remove low quality bases and masked

polylinker; Site 1: BcoR I; Site 2: Not I; U1-D-GG1 is a
normalized library derived from U1-D-GG0. The library was
constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oligo-dT primer containing a
Not I site. Double stranded cDNA was ligated to an BcoR I
adaptor, digested with Not I, and cloned directionally
into pT713-Pac vector: The oligonucleotide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
(dT)18 tail The sequence tag for this library is
TACCTCGAGA. Tissue was obtained from the
Provasoli-Guillard National Center for Culture of Marine

polylinker; Site_1: EcoR I; Site_2: Not I; UI-D-GCl is a
normalized library derived from UI-D-GCO. The library was
constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oligo-dT prime containing a
Not I site. Double stranded cDNA was ligated to an EcoR I
adaptor, digested with Not I, and cloned directionally
into pT773-Pac vector. The oligonucleotide used to prime

Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pr773-Pac vector. The oligomoscleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the

propared from midgates of mid-fifth instar larvae of Helicoverpa armigera using the RNAGents kit (Promega). PolyA mRNA was obtained using the Dynabeads mRNA purification kit (Dynal). First-strand cDNA was made by oligo dT-priming with Strat-strand cDNA was made by oligo dT-priming with Strat-strand cDNA synthesis, size-selected products >600 bp were ligated to 5' linkers 5'-AATTCGGCACAGG-3' and 5'-CCTCGTGCCG-3', directionally cloned into Lambda Zap II (Stratagene) in the Econf (5' and Kho! (3') sites, and packaged using Glapack III Gold Packaging Extracts. The library was amplified, and plasmids were mass-excised using ExAssist helper phage (Stratagene) and propagated in XL1-Blue MRF' cells. Single-pass 5' end sequencing was performed using the T3 primer. Library construction supported by CESAR, a Special Research Centre of the Australian Research Council. Sequencing supported by the Director's Discretionary Fund of the Australian Genome Research Facility."
